ACCOYA NARROWS

Narrow material is an important part of the dimension mix arising from high quality logs. An extended range of narrow material is now available to supplement growth in the standard widths.

These dimensions are ideal for multiple applications including vertical screens, shading screens, mouldings, window beading, cladding, framework, joists, and multiple other uses.

Narrower boards are often combined with wider boards to create contemporary mixed width elevations. And last but not least, narrow material requires less cutting and process steps in the workshop.
